Remark: P = Pass (Below the lower screening limit of table (B))

X = Inconclusive result (Further chemical test was suggested (see table (B).))

NA = Not applicable

ND = Not detected

ppm = Parts per million = mg/kg

µg/cm² = Microgram per square centimetre

Negative = A negative test result indicated the absorbance value of testing sample solution for Cr(VI) testing is less than the absorbance value of the 0.10µg/cm² equivalent comparison standard solution, the Cr(VI) concentration is below the limit of quantification, then the sample is considered to be negative for Cr(VI).

(#1) = According to the client's statement, the Cadmium content of the component is coming from the constituent of electrical contacts. According to EU RoHS Directive, Cadmium in electrical contacts of this component can be exempted.

(#2) = As claimed by the declaration submitted by the client, the Lead content of the components is coming from the copper alloy, the limit for Lead is 40,000ppm respectively.

The related expanded uncertainty (U₉₅) of the Lead (Pb) / Cadmium (Cd) test is 10%.
